

SAMPLE REPORT — illustrative output built with a fictional name; not a real individual assessment.

Leadership Drivers & Natural Aptitudes

Individual Profile: Omar O'Neil

CHALLENGER

Strength Themes:
Perspective · Hope · Curiosity

Pattern: Challenger

Omar O'Neil is boldly direct, results-focused, and unafraid to push back, drives high standards through honest challenge and accountability.

ADAPTATION LOAD	SHAPE	▲ TOP DEMAND	▼ TOP SUPPRESSION	STRAIN
Medium 6 of 7 dimensions shift	Suppression-weighted suppression-spiked	DR Drive 2→3 (Slight)	VI Vision 10→4 (Large)	Low suppression

Your Natural Archetype: Challenger

The Challenger is the forceful contrarian, drive and conviction that push against the consensus. They sit at the Flow/Delivery seam but read as a disruptor: assertive, willing to confront, unafraid to be the dissenting voice. Their value is pressure-testing, they surface what others avoid, refuse easy agreement, and keep a group honest. The low LA and SO are important: the Challenger's force is conviction-driven rather than analytically or procedurally grounded, which is both their edge (decisiveness, courage) and their risk. Friction comes from environments demanding consensus, documentation, and measured patience.

Field position. The Challenger sits in the Flow region of the value-stream field (connecting, coordinating, and building), toward the Flow/Delivery seam, and carries the work in a manner that is people-led and social.

Typical signature. The typical profile of people who match Challenger (seven LDNA dimensions, scored 0–10): elevated on DR (8); low on SO (2), LA (2).

Trait anchor. Grounded in Assertiveness; low Orderliness and Intellect (Five-Factor Model).

How Omar Differs from the Typical Challenger

Every Challenger shares the broad pattern above. Compared with that typical Challenger signature, Omar's natural profile stands apart on the dimensions below, each more than two points from the typical profile, the traits that make this profile distinct within the archetype. (This compares Omar to the typical Challenger; it is separate from the natural-to-role adaptation gap covered on the following pages.)

DR – Drive & Independence: 2 vs. a typical 8 , **6 points lower**. This area runs lighter than is typical for this archetype.

VI – Vision & Ideas: 10 vs. a typical 6 , **4 points higher**. This is a strength expressed more strongly than most of this archetype.

PA – Pace & Patience: 1 vs. a typical 4 , **3 points lower**. This area runs lighter than is typical for this archetype.

Read together, these variances mean Omar occupies a distinct position within the Challenger region rather than sitting at its center, the generic description holds, but these are the edges where Omar is individual.

How to Read Your Profile: The Seven Dimensions

Each dimension is scored 0–10 from your self-description and maps to an established construct in personality science.

- DR, Drive & Independence.** self-direction and assertiveness, the drive to set your own course (*Extraversion: assertiveness*) High: self-directed, drives own agenda; low: collaborative, takes direction.
- SE, Social Energy.** outward, people-directed energy, warmth and expressiveness (*Extraversion: enthusiasm + Agreeableness: compassion*) High: outgoing, energized by people; low: reserved, task-focused.
- PA, Pace & Patience.** a steady, composed tempo and an even keel under pressure (*Emotional stability (low volatility)*) High: patient, steady under pressure; low: fast, urgent, quick to react.
- SO, Structure & Order.** organization, method, and follow-through on detail (*Conscientiousness: orderliness*) High: organized, methodical, process-driven; low: flexible, improvisational.
- CB, Creative Battery.** sustained mental energy for generating and chasing the new (*Openness (the trait behind creativity and exploration)*) High: restless idea-engine, seeks the new; low: prefers proven, settled ground.
- LA, Logic & Analysis.** reasoning and decisions built on evidence and objective scrutiny (*Openness/Intellect: intellect*) High: rigorous, evidence-led; low: intuitive, feel-led.
- VI, Vision & Ideas.** imagination, abstraction, and big-picture thinking (*Openness/Intellect: openness*) High: abstract, big-picture; low: concrete, execution-focused.

The Adaptation Gap: What It Means

The adaptation gap is the distance between your natural disposition, who you are at rest, and what the current role asks of you day to day. Across the seven dimensions you carry a **medium adaptation load**, and the strain leans toward natural traits you hold back at work. The table below sets each dimension's natural and role-required level side by side on the same 0–10 scale, so the size and direction of every shift is visible at a glance.

Dimension	Natural	Adaptive	Gap	Interpretation
DR – Drive & Independence	2	3	Slight	Role asks for slightly more assertiveness, ownership, and independent drive, a minor, low-cost adjustment.
SE – Social Energy	3	2	Slight	Role draws slightly less here, a more task-focused, solitary working mode with less social output. A minor, low-cost adjustment.
PA – Pace & Patience	1	0	Slight	Role draws slightly less here, a faster, more reactive tempo than the naturally patient pace. A minor, low-cost adjustment.
SO – Structure & Order	1	1	Aligned	Aligned, the role level matches the natural level. No adaptation cost on this dimension.
CB – Creative Battery	7	2	Large	A strong natural trait is markedly compressed, the role calls for a narrower, more contained band of mental and creative output. A primary energy drain.
LA – Logic & Analysis	2	3	Slight	Role asks for slightly more analytical rigor and data-driven reasoning, a minor, low-cost adjustment.

VI – Vision & Ideas	10	4	Large	A strong natural trait is markedly compressed, the role calls for a more concrete, execution-first focus with less big-picture ideation. A primary energy drain.
---------------------	----	---	-------	--

Each 0–10 score reflects how saturated that dimension is across the full self-description, scaled so the strongest dimension reads

10. The Gap is the difference between the natural and role-required level, shown as a band: Slight, Moderate, or Large.

What Your Natural Levels Mean

The Gap table above reads the distance between natural and role. This reads the natural levels themselves, who Omar is at rest, before the role acts on it, strongest first.

VI – Vision & Ideas, 10/10 (very high): a strongly conceptual, big-picture orientation: abstract, future-facing, and drawn to ideas and possibility over the concrete here-and-now.

CB – Creative Battery, 7/10 (high): a high creative battery: a restless idea-engine energized by novelty and generation, where routine and repetition drain rather than restore.

SE – Social Energy, 3/10 (low): a reserved, self-contained style: energy goes to the task more than the room, and is most effective one-to-one or in writing rather than through constant interaction.

DR – Drive & Independence, 2/10 (low): a collaborative, low-assertion default: prefers clear direction and shared ownership to driving the agenda alone, and works best with a defined mandate.

LA – Logic & Analysis, 2/10 (low): an intuitive, feel-led default: decisions lean on instinct and pattern more than formal analysis, valuing speed and read-of-the-room over exhaustive scrutiny.

PA – Pace & Patience, 1/10 (very low): a fast, urgent tempo: quick to act and energized by pace, and can find slow, deliberate environments frustrating.

SO – Structure & Order, 1/10 (very low): a low-structure, improvisational default: comfortable operating without fixed process, and can find heavy documentation and procedure constraining.

Adaptation Shape

Before the detail: the overall shape of Omar's adaptation is **suppression-weighted**, the role mainly holds natural qualities back, rather than demanding new ones. The narrative below traces how that plays out dimension by dimension.

The Work Mask: The Adaptation Story

Omar O'Neil carries a **medium adaptation load** between who they are naturally and what their role requires; the strain leans toward natural traits Omar holds back at work.

The role pushes hardest on **DR – Drive & Independence** (assertiveness, ownership, and competitive drive, territory that doesn't come naturally) and **LA – Logic & Analysis** (analytical rigor and data-driven reasoning that isn't part of their natural toolkit). These are non-natural performances that cost daily energy.

The most acute suppression of a signature strength sits on **VI – Vision & Ideas** (10→4, Large suppression), a strong natural trait being held back at work. Caged signature strengths carry their own daily cost even when they don't feel like active effort.

For a Challenger, this adaptation pattern means environments that require sustained diplomacy, careful stakeholder navigation, or consensus-building at the expense of speed. The mask is real, and so is the daily

cost, sustainability depends on whether recovery matches expenditure.

Strain Signal: Over-extension vs. Suppression

Strain signal: Low. Leaning toward the suppression direction. High natural creative energy that the current role holds back (the “caged” pattern), the direction associated with reduced vitality, inauthenticity, and pulling back, rather than the exhaustion of over-extension. The lever is restoring autonomy and an outlet for the suppressed capacity, and protecting recovery.

The Adapted Pattern: Adventurer

Under the demands of the current role, Omar's profile shifts toward the **Adventurer** pattern: the Adventurer is the bold, fast-moving originator at the leading edge of the field, high drive harnessed to ideas and reasoning, with little patience for structure. They move first and figure out the details in motion, thriving on novelty, risk, and open problems where there is no map yet. Their value is momentum and the willingness to commit before certainty: they break inertia and open territory others will later organize. Friction appears wherever the work demands process, documentation, patience, or sustained follow-through, the Adventurer would rather start the next thing than finish and file the last.

The distance between Omar's natural **Challenger** and adapted **Adventurer** is the role pull made visible, the further apart they sit, the more the role is asking Omar to be someone other than their natural self.

LDNA Value-Stream Field

Profile Narrative & Recommendations

Omar’s Strongest Value to the Organization

Omar O'Neil adds the most value when raising the bar. They ask the hard questions others avoid, surface uncomfortable truths, and hold teams and leaders accountable to their commitments.

Where Omar Experiences Friction in This Role

The clearest friction point is environments that require sustained diplomacy, careful stakeholder navigation, or consensus-building at the expense of speed. The largest single adaptation cost lands on **VI – Vision & Ideas** (natural strength compressed), this is where energy leaks daily.

Practical Recommendations

For Omar O'Neil:

- Calibrate directness to context, the same message lands differently with different audiences.
- Build trusted relationships before challenging; challenge without relationship reads as aggression.
- Pick the moments that matter most for pushback and let smaller issues go, constant challenge creates fatigue.
- Use data and evidence to back up challenges; facts make directness constructive rather than confrontational.

For Omar O'Neil's Leader:

- Use them to stress-test plans, surface blind spots, and hold the organization to its commitments.
- Don't punish them for directness, that is their highest-value contribution. Channel it, don't suppress it.
- Pair them with diplomatic profiles for sensitive stakeholder interactions.
- Set clear expectations about which battles are worth fighting and which to let pass.

Complementary Archetypes

Omar's profile runs lightest in **Pace & Patience and Structure & Order**. The archetypes below lead with strength in exactly those areas, so they tend to complement Omar on a team, covering the dimensions Omar would otherwise have to stretch into, while Omar contributes the strengths they lack.

Artisan. The Artisan is the hands-on craftsperson, patient, methodical, quality-focused work done well and consistently. Covers PA, SO.

Analyst. The Analyst is the precision specialist, structure and logic fused, the data-and-detail authority of the Delivery region. Covers PA, SO.

Ambassador. The Ambassador is the diplomatic integrator, high on nearly everything, with people-warmth and structure both present. Covers SO.

This is general, archetype-level complementarity drawn from where Omar's profile is lightest; it is not a validated pairing. A team report assesses real complementarity against the actual people on Omar's team, including shared blind spots this view cannot see.

Artificial Intelligence (AI): How This Profile Meets AI

Artificial Intelligence is changing which parts of work stay valuable. This section estimates how exposed your work is to automation and where to invest so your contribution stays durable. **Archetype Exposure** is the baseline automation exposure for your pattern. **Your Durable Edge** is your strength in the areas AI struggles to replicate. **AI-Oversight Readiness** is your capacity to direct and check AI tools. The move is to protect your low-exposure strengths and, in the higher-exposure areas, shift from doing the work to directing and validating it.

Archetype Exposure	Your Durable Edge	AI-Oversight Readiness
LOW	3/10	2/10

Archetype Exposure is the same for every Challenger. Your Durable Edge, AI-Oversight Readiness, and every bar below are Omar's individual profile.

AI Exposure Profile, your strength (height) by the work's AI exposure (color)

Bar height is Omar's strength in each area; bar color is that area's intrinsic AI exposure, green is durable human work, amber is rising exposure, red is work AI increasingly performs. Exposure is a property of the work and is the same for everyone; the heights are Omar's own.

Omar's AI-Exposure Breakdown

Omar's most durable, low-exposure strengths are **directional judgment and relational & influence**, where human judgment is hardest for AI to replicate. Each of the six areas below carries its own AI-exposure level and a specific move given Omar's strength in it.

Directional Judgment [LOW exposure] · Omar: **5/10**. Setting direction and owning decisions under genuine uncertainty, choosing what matters when there is no clean answer, and being accountable for the call. AI can lay out options and trade-offs, but the accountable decision still belongs to a person, which keeps this low-exposure. **What to do:** A durable, low-exposure edge, there is nothing to automate away here. Protect time for it and let it anchor your value as routine work automates.

Relational & Influence [VERY LOW exposure] · Omar: **3/10**. Building trust, persuading, navigating conflict, and aligning people, the human-to-human work of moving an organization. This is the most durable

capability in every current exposure study; AI barely touches it. **What to do:** A durable, low-exposure edge, there is nothing to automate away here. Protect time for it and let it anchor your value as routine work automates.

Generative Ideation [MED-HIGH exposure] · Omar: **8/10**. Producing novel ideas, framings, drafts, and creative synthesis, generating the raw material of new thinking. Generative models are native to this work, so it is now a high-movement exposure zone; the durable part is taste and judgment about which ideas matter, not raw generation. **What to do:** This is work AI increasingly performs, and where your effort leaks. The move is from generating raw material to curating it on taste and judgment: build fluency with conversational reasoning assistants used for divergence, then human selection.

Analytical Processing [HIGH exposure] · Omar: **1/10**. Structured analysis, data interpretation, evidence evaluation, and documentation, turning information into structured conclusions. This is the single most AI-exposed facet of knowledge work today; computer- and math-type tasks dominate real-world AI usage.

Operational Execution [MED-HIGH exposure] · Omar: **1/10**. Running repeatable systems, coordinating moving parts, and keeping process throughput steady. Workflow and agentic automation targets exactly this layer, so routine coordination is increasingly automatable.

AI Oversight [LOW exposure] · Omar: **2/10**. Judging when AI output is trustworthy, catching failure modes before they propagate, and governing how the tools are used. The shift toward augmentation actively creates demand for this, it is the capability AI exposure makes MORE valuable, not less. **What to do:** The destination. This is the one capability AI makes MORE valuable, and where every move above lands: use your oversight to direct the tools through your exposed work rather than be displaced by them.

One Development Move

Omar's top exposure is generative ideation (8/10), work AI increasingly performs. The highest-leverage move is from generating raw material to curating it on taste and judgment: build enough hands-on fluency with conversational reasoning assistants used for divergence, then human selection to judge when its output is trustworthy and when it is not, so Omar moves from doing the work to directing and validating it. Watch idea homogenisation, convergence onto a narrowed band of options.

Because the specific tools and their capabilities change quickly, treat these categories as a starting point: Omar should keep current through their own hands-on research and by working with a coach or advisor on the best practices for their role.

Summary: Omar O'Neil is a Challenger, boldly direct. Their medium adaptation load represents real daily energy expenditure. At the archetype level their AI exposure is low; their most durable, low-exposure strengths are directional judgment and relational & influence.
