

SAMPLE REPORT — illustrative output built with a fictional name; not a real individual assessment.

Leadership Drivers & Natural Aptitudes

Individual Profile: Dara Fitzgibbon

DESIGNER

Strength Themes:
Perseverance · Curiosity · Judgment

Pattern: Designer

Dara Fitzgibbon is system-minded, analytically precise, and focused on building structures that work, brings order and architecture to complexity.

ADAPTATION LOAD	SHAPE	▲ TOP DEMAND	▼ TOP SUPPRESSION	STRAIN
Medium 6 of 7 dimensions shift	Bidirectional suppression-spiked	SO Structure 4→6 (Moderate)	PA Pace 10→8 (Moderate)	Minimal low markers

Your Natural Archetype: Designer

The Designer is the structured creator, the architect who gives form to ideas. The defining feature is balance: meaningful Vision and Logic sitting on a real base of Structure and Pace, with drive dialed back. They turn concepts into workable designs, systems, and plans, holding both the big picture and the build. Their value is coherence, making things that are both imaginative and buildable, and bringing order to ambiguity without killing the idea. Friction appears under pure improvisation with no structure, or relentless people-facing demand that crowds out the maker's focus. As one of the field's largest, most central regions, Designer is where well-rounded contributors land.

Field position. The Designer sits in the Flow region of the value-stream field (connecting, coordinating, and building), and carries the work in a manner that is structure-led and methodical.

Typical signature. The typical profile of people who match Designer (seven LDNA dimensions, scored 0–10): balanced and moderate across all seven dimensions, with no single spike; relatively strongest on VI (6), SO (6) and lightest on SE (4).

Trait anchor. Grounded in Openness expressed through method (Five-Factor Model).

How Dara Differs from the Typical Designer

Every Designer shares the broad pattern above. Compared with that typical Designer signature, Dara's natural profile stands apart on the dimensions below, each more than two points from the typical profile, the traits that make this profile distinct within the archetype. (This compares Dara to the typical Designer; it is separate from the natural-to-role adaptation gap covered on the following pages.)

PA – Pace & Patience: 10 vs. a typical 5, **5 points higher**. This is a strength expressed more strongly than most of this archetype.

Read together, these variances mean Dara occupies a distinct position within the Designer region rather than sitting at its center, the generic description holds, but these are the edges where Dara is individual.

How to Read Your Profile: The Seven Dimensions

Each dimension is scored 0–10 from your self-description and maps to an established construct in personality science.

- DR, Drive & Independence.** self-direction and assertiveness, the drive to set your own course (*Extraversion: assertiveness*) High: self-directed, drives own agenda; low: collaborative, takes direction.
- SE, Social Energy.** outward, people-directed energy, warmth and expressiveness (*Extraversion: enthusiasm + Agreeableness: compassion*) High: outgoing, energized by people; low: reserved, task-focused.
- PA, Pace & Patience.** a steady, composed tempo and an even keel under pressure (*Emotional stability (low volatility)*) High: patient, steady under pressure; low: fast, urgent, quick to react.
- SO, Structure & Order.** organization, method, and follow-through on detail (*Conscientiousness: orderliness*) High: organized, methodical, process-driven; low: flexible, improvisational.
- CB, Creative Battery.** sustained mental energy for generating and chasing the new (*Openness (the trait behind creativity and exploration)*) High: restless idea-engine, seeks the new; low: prefers proven, settled ground.
- LA, Logic & Analysis.** reasoning and decisions built on evidence and objective scrutiny (*Openness/Intellect: intellect*) High: rigorous, evidence-led; low: intuitive, feel-led.
- VI, Vision & Ideas.** imagination, abstraction, and big-picture thinking (*Openness/Intellect: openness*) High: abstract, big-picture; low: concrete, execution-focused.

The Adaptation Gap: What It Means

The adaptation gap is the distance between your natural disposition, who you are at rest, and what the current role asks of you day to day. Across the seven dimensions you carry a **medium adaptation load**, and the role pulls in two directions at once, holding back traits that come naturally to you while calling for behaviors that do not. The table below sets each dimension’s natural and role-required level side by side on the same 0–10 scale, so the size and direction of every shift is visible at a glance.

Dimension	Natural	Adaptive	Gap	Interpretation
DR – Drive & Independence	7	8	Slight	Role asks for slightly more assertiveness, ownership, and independent drive, a minor, low-cost adjustment.
SE – Social Energy	4	3	Slight	Role draws slightly less here, a more task-focused, solitary working mode with less social output. A minor, low-cost adjustment.
PA – Pace & Patience	10	8	Moderate	Natural level is moderately compressed, the role calls for a faster, more reactive tempo than the naturally patient pace.
SO – Structure & Order	4	6	Moderate	Role calls for noticeably more structure, process discipline, and methodical order, a moderate, ongoing stretch.
CB – Creative Battery	5	3	Moderate	Natural level is moderately compressed, the role calls for a narrower, more contained band of mental and creative output.
LA – Logic & Analysis	5	5	Aligned	Aligned, the role level matches the natural level. No adaptation cost on this dimension.

VI – Vision & Ideas	7	6	Slight	Role draws slightly less here, a more concrete, execution-first focus with less big-picture ideation. A minor, low-cost adjustment.
---------------------	---	---	--------	---

Each 0–10 score reflects how saturated that dimension is across the full self-description, scaled so the strongest dimension reads 10. The Gap is the difference between the natural and role-required level, shown as a band: Slight, Moderate, or Large.

What Your Natural Levels Mean

The Gap table above reads the distance between natural and role. This reads the natural levels themselves, who Dara is at rest, before the role acts on it, strongest first.

- PA – Pace & Patience, 10/10 (very high):** a patient, steady tempo: composed under pressure, slow to escalate, and a stabilising presence when others speed up or react.
- DR – Drive & Independence, 7/10 (high):** a strong, self-directed drive: sets the agenda, acts independently, and resists being managed closely. Ownership and autonomy are essential to engagement.
- VI – Vision & Ideas, 7/10 (high):** a strongly conceptual, big-picture orientation: abstract, future-facing, and drawn to ideas and possibility over the concrete here-and-now.
- CB – Creative Battery, 5/10 (moderate):** a moderate creative battery: engages with new ideas without a constant need for novelty, alternating comfortably between generating and consolidating.
- LA – Logic & Analysis, 5/10 (moderate):** balanced reasoning: uses analysis where it helps but will move on judgment, neither exhaustively analytical nor purely intuitive.
- SE – Social Energy, 4/10 (moderate):** moderate social energy: sociable when needed but equally comfortable heads-down, with relationships mattering without dominating the working style.
- SO – Structure & Order, 4/10 (moderate):** moderate structure: can impose order when a task needs it but does not require fixed process to function, balancing method with flexibility.

Adaptation Shape

Before the detail: the overall shape of Dara’s adaptation is **bidirectional**, the most effortful pattern, the role both demands qualities Dara must reach for and suppresses qualities they would naturally express, pulling in two directions at once. The narrative below traces how that plays out dimension by dimension.

The Work Mask: The Adaptation Story

Dara Fitzgibbon carries a **medium adaptation load** between who they are naturally and what their role requires; the role pulls in two directions at once, holding back traits that come naturally to Dara while calling for behaviors that do not.

The role pushes hardest on **SO – Structure & Order** (discipline, process adherence, and methodical organization that isn't instinctive) and **DR – Drive & Independence** (even more assertiveness and autonomous drive than their already-strong natural baseline). These are non-natural performances that cost daily energy.

The most acute suppression of a signature strength sits on **PA – Pace & Patience** (10→8, Moderate suppression), a strong natural trait being held back at work. Caged signature strengths carry their own daily cost even when they don't feel like active effort.

For a Designer, this adaptation pattern means high-ambiguity environments without clear parameters, or roles requiring heavy social performance beyond their natural reserve. The mask is real, and so is the daily cost, sustainability depends on whether recovery matches expenditure.

Strain Signal: Over-extension vs. Suppression

Strain signal: Minimal. Few strain markers are present and the role does not appear to cage the natural energy, so neither the over-extension nor the suppression pattern is pronounced.

The Adapted Pattern: Builder

Under the demands of the current role, Dara's profile shifts toward the **Builder** pattern: the Builder is the builder-owner: enough vision to see the opportunity, enough structure and drive to actually stand something up. They are the most "well-rounded with a motor" of the Vision-adjacent types, comfortable carrying an idea from concept through the early scaffolding of a real operation. Value is end-to-end ownership, they will both originate and organize, which makes them natural founders and general managers. Friction comes from deep specialist work that requires staying in one lane, and from environments with no room to drive.

The distance between Dara's natural **Designer** and adapted **Builder** is the role pull made visible, the further apart they sit, the more the role is asking Dara to be someone other than their natural self.

LDNA Value-Stream Field

Natural (Designer) shown as filled navy glyph; adaptive (Builder) as teal outline. The vector is the daily role pull.

✓ Where the Role Matches Dara	■ Where the Role Stretches Dara
LA – Logic & Analysis (5→5, Aligned): Role leverages natural analytical strength, strong alignment.	PA – Pace & Patience (10→8, Moderate): Natural patience overridden, role demands faster, more reactive tempo. SO – Structure & Order (4→6, Moderate): Role demands more discipline and process adherence than is instinctive. CB – Creative Battery (5→3, Moderate): Creative restlessness contained, role demands focused execution over exploration.

Profile Narrative & Recommendations

Dara’s Strongest Value to the Organization

Dara Fitzgibbon adds the most value when designing processes, systems, and frameworks that create operational clarity. They make organizations scale by ensuring the underlying architecture is sound.

Where Dara Experiences Friction in This Role

The clearest friction point is high-ambiguity environments without clear parameters, or roles requiring heavy social performance beyond their natural reserve. The largest single adaptation cost lands on **PA – Pace & Patience** (natural strength compressed), this is where energy leaks daily.

Practical Recommendations

For Dara Fitzgibbon:

- Accept that some ambiguity is permanent, design systems that are robust to uncertainty rather than waiting for perfect clarity.
- When collaborating, lead with the structural logic of your recommendation; let the architecture speak for itself.
- Build relationships with the people who will use your systems, their adoption is as important as your design.
- Schedule periodic reviews of existing structures to prevent over-engineering or rigidity as conditions change.

For Dara Fitzgibbon's Leader:

- Use them to build the operational backbone, processes, systems, and frameworks that make the organization scale.
- Give them clear parameters and defined problems; ambiguity without boundaries is their kryptonite.
- Don't expect them to be the social glue of the team, pair them with relational profiles for stakeholder work.
- Their systems will outlast most initiatives; invest in giving them time to build things properly rather than rushing delivery.

Complementary Archetypes

Dara's profile runs lightest in **Social Energy and Structure & Order**. The archetypes below lead with strength in exactly those areas, so they tend to complement Dara on a team, covering the dimensions Dara would otherwise have to stretch into, while Dara contributes the strengths they lack.

Ambassador. The Ambassador is the diplomatic integrator, high on nearly everything, with people-warmth and structure both present. Covers SE, SO.

Expert. The Expert is the deep specialist, mastery built on structure and standards. Covers SO.

Organizer. The Organizer is the operational coordinator, structure plus people plus drive, aimed at making the machine run. Covers SE, SO.

This is general, archetype-level complementarity drawn from where Dara's profile is lightest; it is not a validated pairing. A team report assesses real complementarity against the actual people on Dara's team, including shared blind spots this view cannot see.

Artificial Intelligence (AI): How This Profile Meets AI

Artificial Intelligence is changing which parts of work stay valuable. This section estimates how exposed your work is to automation and where to invest so your contribution stays durable. **Archetype Exposure** is the baseline automation exposure for your pattern. **Your Durable Edge** is your strength in the areas AI struggles to replicate. **AI-Oversight Readiness** is your capacity to direct and check AI tools. The move is to protect your low-exposure strengths and, in the higher-exposure areas, shift from doing the work to directing and validating it.

Archetype Exposure	Your Durable Edge	AI-Oversight Readiness
MEDIUM	6/10	6/10

Archetype Exposure is the same for every Designer. Your Durable Edge, AI-Oversight Readiness, and every bar below are Dara's individual profile.

AI Exposure Profile, your strength (height) by the work's AI exposure (color)

Bar height is Dara's strength in each area; bar color is that area's intrinsic AI exposure, green is durable human work, amber is rising exposure, red is work AI increasingly performs. Exposure is a property of the work and is the same for everyone; the heights are Dara's own.

Dara's AI-Exposure Breakdown

Dara's most durable, low-exposure strengths are **directional judgment** and **ai oversight**, where human judgment is hardest for AI to replicate. Each of the six areas below carries its own AI-exposure level and a specific move given Dara's strength in it.

Directional Judgment [LOW exposure] · Dara: 7/10. Setting direction and owning decisions under genuine uncertainty, choosing what matters when there is no clean answer, and being accountable for the call. AI can lay out options and trade-offs, but the accountable decision still belongs to a person, which keeps this low-exposure. **What to do:** A durable, low-exposure edge, there is nothing to automate away here. Protect time for it and let it anchor your value as routine work automates.

Relational & Influence [VERY LOW exposure] · Dara: 4/10. Building trust, persuading, navigating conflict, and aligning people, the human-to-human work of moving an organization. This is the most durable capability in

every current exposure study; AI barely touches it. **What to do:** A durable, low-exposure edge, there is nothing to automate away here. Protect time for it and let it anchor your value as routine work automates.

Generative Ideation [MED-HIGH exposure] · Dara: 7/10. Producing novel ideas, framings, drafts, and creative synthesis, generating the raw material of new thinking. Generative models are native to this work, so it is now a high-movement exposure zone; the durable part is taste and judgment about which ideas matter, not raw generation. **What to do:** This is work AI increasingly performs, and where your effort leaks. The move is from generating raw material to curating it on taste and judgment: build fluency with conversational reasoning assistants used for divergence, then human selection.

Analytical Processing [HIGH exposure] · Dara: 5/10. Structured analysis, data interpretation, evidence evaluation, and documentation, turning information into structured conclusions. This is the single most AI-exposed facet of knowledge work today; computer- and math-type tasks dominate real-world AI usage.

Operational Execution [MED-HIGH exposure] · Dara: 6/10. Running repeatable systems, coordinating moving parts, and keeping process throughput steady. Workflow and agentic automation targets exactly this layer, so routine coordination is increasingly automatable. **What to do:** This is work AI increasingly performs, and where your effort leaks. The move is from running the process to designing and supervising it: build fluency with agentic workflow automation and in-suite copilots.

AI Oversight [LOW exposure] · Dara: 6/10. Judging when AI output is trustworthy, catching failure modes before they propagate, and governing how the tools are used. The shift toward augmentation actively creates demand for this, it is the capability AI exposure makes MORE valuable, not less. **What to do:** The destination. This is the one capability AI makes MORE valuable, and where every move above lands: use your oversight to direct the tools through your exposed work rather than be displaced by them.

One Development Move

Dara's top exposure is generative ideation (7/10), work AI increasingly performs. The highest-leverage move is from generating raw material to curating it on taste and judgment: build enough hands-on fluency with conversational reasoning assistants used for divergence, then human selection to judge when its output is trustworthy and when it is not, so Dara moves from doing the work to directing and validating it. Watch idea homogenisation, convergence onto a narrowed band of options.

Because the specific tools and their capabilities change quickly, treat these categories as a starting point: Dara should keep current through their own hands-on research and by working with a coach or advisor on the best practices for their role.

Summary: Dara Fitzgibbon is a Designer, system-minded. Their medium adaptation load represents real daily energy expenditure. At the archetype level their AI exposure is medium; their most durable, low-exposure strengths are directional judgment and ai oversight.
