

Leadership Drivers & Natural Aptitudes

Meridian Dynamics · Founders Team — 4 People

SAMPLE REPORT — illustrative output built with fictional names for demonstration; not a real individual or team assessment.

JACK DALTON

Challenger · Leadership · Creativity · Curiosity

ELENA VARGAS

Strategist · Leadership · Prudence · Curiosity

MIA CHEN

Challenger · Curiosity · Creativity · Perspective

SAM OKAFOR

Builder · Perspective · Perseverance · Curiosity

The headline. This is a 4-person team, spanning the Delivery, Vision regions. Together you are strongest in structure, drive and creative energy. No one naturally occupies the Flow region.

dimensions well held

ADD A PROFILE

—

covers the gap

Where the team sits against the norm (Natural)

Each trait scored against the population norm on one shared ruler — bars are directly comparable between teammates.

Each teammate’s natural profile as a within-person shape. Where everyone’s bar on a row is short, the team shares a blind spot on that dimension.

SAMPLE
Illustrative · fictional names

Everyone Against the Norm

Each individual report scales that person so their strongest dimension reads 10, which makes profiles unreadable against each other. This report instead scores every teammate against the **population norm**: the chart on the previous page shows that as standard deviations from the norm, and the table below shows it as a percentile, so a single shared scale lets the whole team be read on one ruler.

Raw trait intensity on a shared ruler (Natural)

Raw intensity partly reflects how broadly a profile is expressed; the shape chart above controls for that.

Where everyone lands against the norm (percentile)

Dim	Jack	Elena	Mia	Sam	Team
DR Drive	99th	93th	40th	87th	Covered
SE Social	92th	62th	24th	72th	Covered
PA Pace	88th	71th	59th	34th	Covered
SO Structure	31th	100th	9th	99th	Covered
CB Creative	98th	67th	96th	88th	Covered
LA Logic	83th	71th	25th	25th	Covered
VI Vision	97th	66th	95th	85th	Covered

Percentiles are each person's standing against the population norm. The Team column reads Covered (someone sits above the norm), Thin (the best is only near it) or Exposed (everyone below it). Exposed rows are tinted.

The Team on the Field

Your natural archetypes are Jack, Elena, Mia and Sam as Challenger, Strategist, Challenger, Builder. On the value-stream field they cluster like this:

Where the team sits on the value-stream field

Filled glyph = each person's natural archetype; outline = where their role pulls them. Empty regions are the team's structural gaps.

A region the team does not occupy.

No one on the team sits naturally in the **Flow** region. Work that lives there gets done by stretch, not by strength — a structural gap to cover deliberately.

Coverage Map: Who Anchors What

For each dimension, who the team’s go-to is and whether the capability is well held, thin, or a gap.

Dimension	Team’s go-to	Status	What it means for the team
DR Drive & Independence	Jack (99th)	Covered	Well held — Jack anchors it with backup (99th percentile).
SE Social Energy	Jack (92th)	Covered	Well held — Jack anchors it with backup (92th percentile).
PA Pace & Patience	Jack (88th)	Covered	Well held — Jack anchors it with backup (88th percentile).
SO Structure & Order	Elena (100th)	Covered	Well held — Elena anchors it with backup (100th percentile).
CB Creative Battery	Jack (98th)	Covered	Well held — Jack anchors it with backup (98th percentile).
LA Logic & Analysis	Jack (83th)	Covered	Well held — Jack anchors it with backup (83th percentile).
VI Vision & Ideas	Jack (97th)	Covered	Well held — Jack anchors it with backup (97th percentile).

Team strengths.

The team is well held on structure, drive, creative energy, vision, social energy, patience and logic — go-to people: structure (Elena); drive (Jack); creative energy (Jack); vision (Jack).

AI-oversight anchor.

Jack has the team’s highest AI-oversight readiness (7/10) — the natural person to lead tool adoption and judge when automated output is trustworthy for the group.

Complementary Pairs: Who Covers Whom

A complementary pair is two teammates where one sits **above** the norm on a dimension the other sits **below** — so one naturally covers the other’s gap rather than duplicating the same strength. The 3 strongest pairings on this team are ranked below by how much their profiles interlock (and how few blind spots they share).

#	Pair	Complement	What interlocks — and what to watch
1	Elena + Mia Strategist · Challenger	One-way	Elena covers Mia’s structure and logic.
2	Jack + Sam Challenger · Builder	One-way	Jack covers Sam’s logic.
3	Jack + Mia Challenger · Challenger	One-way	Jack covers Mia’s social energy and logic.

Elena + Mia is the strongest pairing, though it runs mostly one way — Elena covers Mia more than the reverse, so pair them where Elena’s strengths lead.

Blind Spots & Points of Friction

1. Several strong drivers.

Jack, Elena and Sam all run high on Drive — plenty of ownership, but potential contention on who owns which call. Make lanes explicit.

Quick-Reference Cards: How to Work With Each Person

One card per teammate — how to get the best from them, what drains them, and how they show up under load.

JACK DALTON — Challenger

steady, flexible tempo · strain: burnout

✓ HOW TO COMMUNICATE

- Give them ownership and bring decisions, not just problems — let them drive.
- Frame it around the big picture and the long horizon, not only the next step.
- Lead with what's new and possible; give them room to generate and reinvent.
- An unhurried, warm delivery lands better than urgency.

✗ WHAT TO AVOID

- Don't bury them in process or documentation for its own sake — their lightest ground.
- Don't demand heavy front-of-house social performance or constant small talk.

■ UNDER PRESSURE

- Has headroom — few strain markers, absorbs load without obvious overextension.
- Under real load, retreats into their strongest lane and goes heads-down.
- Best lever: a trusted peer to pressure-test before finalizing alone.

ELENA VARGAS — Strategist

balanced tempo · strain: mixed signals

✓ HOW TO COMMUNICATE

- Be organized and specific; give them a clear structure and a defined process.
- Give them ownership and bring decisions, not just problems — let them drive.
- Frame it around the big picture and the long horizon, not only the next step.

✗ WHAT TO AVOID

- Don't demand heavy front-of-house social performance or constant small talk.
- Don't ask for constant reinvention; they prefer depth on proven ground.
- Don't keep them away from independent drive and ownership — their role already caps this natural strength, and starving it further is what drains them; give them an outlet toward it instead.

■ UNDER PRESSURE

- Mixed signals — both push and drag are present.
- May show restlessness or withdrawal depending on the week.
- Best lever: check which pattern is live before adjusting load.

MIA CHEN — Challenger

balanced tempo · strain: mixed signals

✓ HOW TO COMMUNICATE

- Frame it around the big picture and the long horizon, not only the next step.
- Lead with what's new and possible; give them room to generate and reinvent.
- A calm, unhurried delivery lands best; they hold a steady keel.

✗ WHAT TO AVOID

- Don't bury them in process or documentation for its own sake — their lightest ground.
- Don't demand heavy front-of-house social performance or constant small talk.
- Don't keep them away from idea generation and reinvention — their role already caps this natural strength, and starving it further is what drains them; give them an outlet toward it instead.

■ UNDER PRESSURE

- Mixed signals — both push and drag are present.
- May show restlessness or withdrawal depending on the week.
- Best lever: check which pattern is live before adjusting load.
- On contested calls may defer rather than seize ownership.

SAM OKAFOR — Builder*fast, urgent tempo · strain: mixed signals***✓ HOW TO COMMUNICATE**

- Be organized and specific; give them a clear structure and a defined process.
- Frame it around the big picture and the long horizon, not only the next step.
- Give them ownership and bring decisions, not just problems — let them drive.
- Keep it concise and get to the point — they move fast.

✗ WHAT TO AVOID

- Don't drown them in dense analysis or data scrutiny — their lightest ground.
- Don't impose slow, over-deliberate pacing — they move fast.
- Don't keep them away from independent drive and ownership — their role already caps this natural strength, and starving it further is what drains them; give them an outlet toward it instead.

■ UNDER PRESSURE

- Mixed signals — both push and drag are present.
- May show restlessness or withdrawal depending on the week.
- Best lever: check which pattern is live before adjusting load.

How to Work as a Team

For the team

- **Route work to the natural owner.** Let each strength flow to whoever anchors it — Elena on structure; Jack on drive; Jack on creative energy; Jack on vision.
- **Make decision rights explicit.** It settles both tempo differences and who owns contested calls.

For the leader or coach

- **Put Jack in charge of AI tooling.** Highest oversight readiness on the team — best placed to govern how the tools get used.

Method note: per-person scores use the LDNA v21 engine. Individual reports normalize each person to their own peak; for cross-person comparison this team view instead scores every dimension against the population norm (the full set of responses collected for this assessment), so all teammates are read on one common scale. "Covered / Thin / Exposed" reads whether anyone on the team sits above, near, or below the norm on each dimension. The suggested profile is the archetype whose typical centroid best covers the team's gap. This is a screen, not a validated team-selection instrument.
